Immunospark

Immunospark is an ISO9001 and ISO13485 certified provider of high quality diagnostic solutions in the POC, Immunology and Molecular diagnostics field.

The partners/customers of Immunospark can access an easy and sustainable “*Diagnostic Information*” as a key for the global health systems to provide a better qualified and on time input to face a critical disease. Prevention of disease and personalized therapy are now being a reality for patients and physicians, provided that an innovative, integrated approach to diagnostics is made available.

Our Mission

After 20 years of experience in the product design, development, manufacturing and marketing of systems in the Immunology and Molecular Diagnostics fields, the mission of Immunospark is to make integrated diagnostic formats available to our customers and partners.

While this, we keep to develop new products and diagnostic solutions based on the increasing demand for standardized, qualified and automated systems at a sustainable price.

Quickspark kits

In different conditions of use, a completely automated solution is not always fitting the needs of a modern laboratory or it satisfies the requirements of a specific environment. Sometimes it is mandatory to introduce a simpler and “*plug&play*” solution with the purpose to receive immediately the “*diagnostic information*”, for urgency as well as economical reasons.

The *Quickspark* kits do not require warm-up time and tough technological compounds, this make it a good choice for not perfectly equipped facilities as well as spurious routine in an automated lab.

Immunospark offers a complete range of lateral flow tests including panels for infectious diseases, gastroenterology, tumor markers, hormones, drugs of abuse and cardiac markers.
